

THE AI STICK FIGURE BLUEPRINT

Create YouTube Videos in Under 2 Hours - No Drawing Required

TOPIC
"When you say
you'll sleep early"

REPEATABLE SYSTEM
Idea -> Script -> Visuals ->
Voice -> Edit

THE SYSTEM

IDEA -> SCRIPT -> IMAGES -> VOICE -> EDIT -> UPLOAD

Your job is not to animate from scratch. Your job is to move one clear idea through a repeatable production system.

WHAT YOU NEED

A topic, a few AI tools, and this blueprint.

- Copy-and-paste prompts
- Simple stick figure visuals
- AI voiceover
- CapCut for assembly

THE GOAL

Take a simple idea and turn it into a finished YouTube video without drawing anything yourself.

REPEATABLE, NOT COMPLICATED

"Make the first video. Then make the second one faster."

TOOLS YOU NEED

FREE-TO-START TOOLKIT

You can build the workflow with a small number of familiar tools.

Tool	What you'll use it for
ChatGPT	Generate scripts, scene breakdowns, and image prompts
Gemini	Alternative for script or image generation
ElevenLabs	Generate AI voiceovers
CapCut	Assemble, caption, and export the final video

IMPORTANT

Free plans, credits, voices, and features can change. The workflow matters more than any single tool.

You do not need Photoshop, After Effects, or drawing skills.

WRITE YOUR SCRIPT

Open ChatGPT or Gemini and paste this prompt.

COPY THIS PROMPT

You are a scriptwriter helping me create a YouTube video.

Topic: [WRITE YOUR TOPIC HERE]

Length: [SHORT / MEDIUM / LONG]

Generate everything in this exact text format for every scene:

Scene [number]:

Script: [1 dry, deadpan sentence - maximum 15 words]

Image Prompt: "[A clear description of exactly what is happening in this scene]"

After all scenes, add:

VOICEOVER: [All scene script lines combined into one paragraph, with "..." between each scene.]

RULES:

- Short = 5 scenes
- Medium = 10 scenes
- Long = 20 scenes
- One sentence per scene
- Maximum 15 words per sentence
- Scene 1 must immediately establish the relatable situation
- Keep the writing dry, deadpan, and conversational
- No emojis
- No exclamation marks
- Keep each scene visually distinct
- The image prompt must clearly show what is being narrated
- Final scene must contain a short, natural, deadpan subscribe line
- Do not generate the actual images
- Only generate the text and prompts

REPLACE THE TOPIC

CHOOSE THE LENGTH

HIT SEND

TOPICS THAT WORK

Start with situations people recognize instantly.

When you say you'll sleep early

Every group project ever

Introverts at a party

What your dog is actually thinking

Every Monday morning

When your alarm goes off

Trying to save money

When someone says "we need to talk"

Opening your bank account

THE RELATABILITY TEST

Would someone understand the situation before you explain the joke?

GOOD

Simple everyday situations. Strong contrast. One obvious joke per scene.

AVOID

Complicated plots, too many characters, and visuals that are hard to understand.

GENERATE YOUR IMAGES

ONE SCENE = ONE IMAGE

A 10-scene video needs about 10 images. Generate them separately so you can control timing during editing.

MASTER STYLE PROMPT

Simple stick figure drawing of [WHAT IS HAPPENING IN THIS SCENE], white background, black lines only, ultra minimal detail, hand-drawn cartoon style, simple circular head, thin black stick figure body, consistent character proportions, clean composition, no color, no shading, no realistic details, no text, no watermark.

KEEP THESE FIXED

White background

Black lines

Same character proportions

Minimal detail

No shading

No color

IMAGE CONSISTENCY

MAKE EVERY SCENE FEEL LIKE ONE VIDEO

The biggest visual mistake is letting the character style change from scene to scene.

01**SAME CHARACTER**

Repeat the same character description in every prompt.

02**SAME STYLE**

Keep the same white background, black line, hand-drawn look.

03**SAME LEVEL OF DETAIL**

Do not mix ultra-simple scenes with highly detailed illustrations.

04**CLEAR ACTION**

Ask: "What would I literally see on screen while this sentence is spoken?"

REMEMBER

Clear + consistent + funny beats beautiful + complicated.

SAMPLE IMAGE PROMPTS

Example topic: **When you say you'll sleep early**

SCENE 1

Stick figure in bed at 9pm, determined face, clock showing 9:00.

SCENE 2

Same stick figure scrolling on a phone in bed.

SCENE 3

Same stick figure still awake, clock showing 1:00am.

SCENE 4

Same stick figure watching one more video with one tired eye.

SCENE 5

Same stick figure pointing at a subscribe button, exhausted expression.

Add the same master style instructions to each scene. Repeat: "same simple stick figure character design, same head shape, same body proportions, same black line style."

GENERATE YOUR VOICEOVER

Open ElevenLabs and choose Text to Speech.

Paste only the **VOICEOVER** paragraph from your generated script.

Setting	Recommended starting point
Voice	Natural conversational voice
Stability	Around 50%
Clarity / Similarity	Around 75%
Speed	Around 1.10x
Style	Low to moderate

DELIVERY

Think calm, conversational, slightly deadpan - not dramatic or commercial.

Use "..." between scenes to create small natural pauses and make syncing easier.

ASSEMBLE IN CAPCUT

- 01 Create a new project.
- 02 Choose **16:9** for a standard YouTube video.
- 03 Import the voiceover and place it on the audio track.
- 04 Import all scene images and place them above the audio.
- 05 Play the voiceover and trim each image to match its scene.
- 06 Add auto captions and make them large and easy to read.
- 07 Add optional background music at roughly 5-10% volume.
- 08 Watch the whole video and export at a high-quality setting such as 1080p.

EDITING RULES

LET THE VOICEOVER CONTROL THE TIMELINE

IMAGE CHANGES WHEN THE IDEA CHANGES

Do not force every image to stay for the same number of seconds.

DO

- Start immediately
- Match image to narration
- Use readable captions
- Keep music quiet

DON'T

- Leave dead space
- Over-edit the visuals
- Let captions cover the character
- Let music overpower the voice

FINAL WATCH

No missing scenes. No awkward pauses. No unreadable captions. No distracting music.

THE 2-HOUR WORKFLOW

00-15 MIN	Idea + Script	Choose topic and generate script.
15-60 MIN	Images	Generate and save one image per scene.
60-75 MIN	Voiceover	Generate narration and listen once.
75-115 MIN	Edit	Sync images, captions, timing, music.
115-120 MIN	Final Check	Watch once and export.

YOUR FIRST VIDEO MAY TAKE LONGER.

The goal is to become faster through repetition, not to rush the first attempt.

THE MASTER CHECKLIST

IDEA

- ☐ Pick a relatable topic
- ☐ Choose video length
- ☐ Generate script

IMAGES

- ☐ One image per scene
- ☐ Same character style
- ☐ Save in scene order

VOICE

- ☐ Paste voiceover
- ☐ Add pauses
- ☐ Generate and review

EDIT

- ☐ Set 16:9
- ☐ Import voice + images
- ☐ Sync scenes
- ☐ Add captions

FINAL

- ☐ Strong opening
- ☐ Clear visuals
- ☐ Clear voice
- ☐ CTA at end
- ☐ Export

REPEAT

Make another video using the same system.

THE PROMPT IN ACTION

See exactly what happens when you run the master prompt from the previous page.

INPUT

Topic: When you say you'll sleep early
Length: Short

SCENE 1

Script: You decide at 9pm that tonight you will definitely sleep early.

Image: Stick figure in bed at 9pm, determined face, clock showing 9:00.

SCENE 2

Script: You check your phone for just five minutes.

Image: Same stick figure scrolling on a phone in bed.

SCENE 3

Script: It is now 1am.

Image: Same stick figure awake in bed, clock showing 1:00am.

SCENE 4

Script: You watch one more video.

Image: Same stick figure watching a phone with one tired eye.

SCENE 5

Script: Subscribe if tomorrow you will definitely sleep early.

Image: Same stick figure pointing at a subscribe button, exhausted.

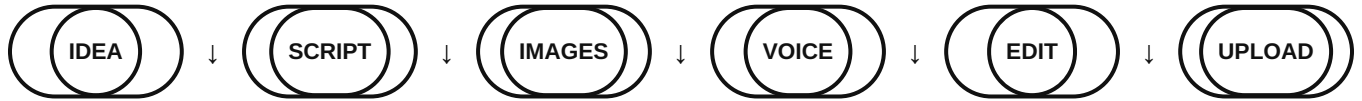

VOICEOVER

You decide at 9pm that tonight you will definitely sleep early... You check your phone for just five minutes... It is now 1am... You watch one more video... Subscribe if tomorrow you will definitely sleep early.

THAT'S THE SYSTEM.

Run the prompt -> create the scenes -> generate the voice -> assemble everything in CapCut.

YOUR FIRST VIDEO

**NO DRAWING TABLET.
NO ANIMATION DEGREE.
NO COMPLICATED SOFTWARE.**

Just a repeatable system you can use to turn simple ideas into YouTube videos.

**CREATE.
PUBLISH.
REPEAT.**

The first video teaches you the system. The next videos make you faster at it.
