

THE DEFINITIVE GUIDE

AI Model Blueprint

*Create your AI model. Then turn it into
realistic videos — step by step.*

Step I.

Get Reference Images

Use 3–5 clear images to establish the visual foundation of your new fictional AI model.

FRONT PROFILE

Clear face, eyes, and full facial structure visible.

3/4 ANGLE

Crucial for defining dimensional face shape.

FULL BODY

Head to feet. Useful for body proportions and styling.

STYLE DIRECTION

Outfit and general vibe for visual aesthetic.

EDITORIAL NOTE

"Use images you own or have permission to use. Do not replicate a real person's identity."

Clear face + plain background = optimal references.

Step II.

Generate the Master

Upload your curated reference images into Gemini and apply the exact prompt below.

THE CORE PROMPT

"I uploaded several reference images. Use them only as visual guidance to create a new fictional adult AI model. Do not copy any real person's exact identity. Combine useful visual traits from the references into one consistent character. Create a photorealistic adult female model with a natural face, realistic skin, believable proportions, and a clean modern look. Keep the character consistent across future images. Generate a clean head-and-shoulders reference image on a simple neutral background, facing the camera, with even studio lighting and clear facial details. Keep the character fully adult."

Goal: Select the single finest generated image and save it as your Master Reference.

YOU CAN CHANGE HAIR, OUTFIT, AGE RANGE, STYLE, OR BACKGROUND IN YOUR OWN PROMPT.

Step III.

Bring into Google Flow

Use your master image to create a reusable character, then use that character in your video prompts.

01. Open Flow
Start a new project in the Google Flow app.

02. Create Character
Upload and use your saved master image.

03. Name It
Example: Mia.

04. Use @name
Add it directly to your video prompts.

IN YOUR FLOW PROMPT

"Use the character by name, for example: @Mia walking into a cafe and talking to the camera."

Keep the same character name and reference throughout your project.

Step IV.

Write Your Video Prompt

Describe what you want the character to do in extreme detail. Use this exact reference prompt structure.

THE MASTER REFERENCE PROMPT

CHARACTER

Use the character — keep the face, hairstyle, body proportions, clothing, skin appearance, and overall character identity exactly as shown in the reference. Do not change the character's appearance, outfit, or visual identity.

CAMERA

Realistic third-person medium close-up at approximately chest height, camera positioned a few feet in front of the character. Static camera with very subtle natural handheld drift. Framing stays steady throughout. Single continuous take, no cuts.

SETTING

Keep the character in the exact environment and lighting associated with the character reference. Do not change the location, background, color temperature, or overall visual style.

ACTION

The character faces the camera directly throughout the entire shot and speaks straight to the viewer. She starts with a calm, natural expression and direct eye contact.

At the beginning, she gives a very short pause and slightly raises her eyebrows as if she is about to reveal something surprising.

As she says “main real nahi hoon,” she leans very slightly toward the camera and gives a subtle knowing smile, creating the feeling that she is revealing a secret.

As she says “Main ek AI model hoon,” she straightens slightly and gives a small, confident gesture toward herself.

For “Aur haan... aap bhi aisi AI model bana sakte ho,” she makes a small natural gesture toward the camera/viewer, with a friendly and confident expression.

Keep all movements subtle and realistic. Natural blinking, realistic eye movement, small head movement, believable facial expressions, natural hand gestures. Do not overact. She should feel like a real creator casually talking to someone through a phone camera, not like a scripted commercial actress.

AUDIO & DIALOGUE

Natural female Hinglish/Hindi voice, confident, conversational, slightly playful at the reveal, then warm and convincing. Brisk but natural pacing so the entire dialogue fits comfortably within 8 seconds. No long pauses.

“Wait... main real nahi hoon. Main ek AI model hoon. Aur haan... aap bhi aisi AI model bana sakte ho.”

Mouth movements must be accurately lip-synced to every spoken word. Natural breathing and realistic speech rhythm. Very subtle natural room ambience under the voice. Voice remains completely clear and prominent. No music.

VISUAL QUALITY & RESTRICTIONS

Photorealistic, premium social-media UGC advertisement, realistic skin and facial movement, natural motion, authentic smartphone-camera feel.

Do not add subtitles, captions, text overlays, logos, watermarks, extra people, extra objects, dramatic transitions, cuts, zooms, exaggerated gestures, exaggerated facial expressions, or artificial-looking movements.

Bonus.

Let AI Write Your Flow Prompt

Tell ChatGPT or Gemini what you want. Let it turn your simple idea into a detailed Flow prompt.

COPY + PASTE INTO CHATGPT / GEMINI

Write a detailed Google Flow video prompt for my AI character.

Use the REFERENCE PROMPT below as a guide for structure and detail. Do not copy its scene.

REFERENCE PROMPT:

[PASTE A REFERENCE PROMPT HERE]

MY VIDEO IDEA:

[DESCRIBE WHAT YOU WANT THE CHARACTER TO DO]

MY DIALOGUE:

[WRITE EXACTLY WHAT THE CHARACTER SHOULD SAY]

Rules:

- Keep the same character.
- Do not redesign her unless asked.
- Do not add aspect ratio or other settings that are selected in Flow.
- Match actions and expressions to the dialogue.
- Add natural audio and lip-sync directions.
- Add useful continuity and negative instructions.
- Return only the final Flow prompt.

EXAMPLE IDEA

"I want my AI girl to sit in a cafe, look at the camera and explain that creating an AI model is easy."

Your AI assistant will turn that simple idea into a much more detailed Flow-ready prompt.

The 5-Minute Checklist

01. **Get References**
Clear face, 3/4 angle, full body.

02. **Make Model**
Upload to Gemini, generate one character.

03. **Save Master**
This becomes your definitive reference.

04. **Flow Setup**
Save character, use @Name in prompts.

05. **Write Scene**
Action + expression + dialog + audio.

06. **Refine**
Tweak one variable at a time.

KEEP IT SIMPLE

One clear idea per clip. One clear action. One clear dialogue.
